ClinicalTrials

YOUR
COMPUTERIZED
COGNITIVE
TESTING SOLUTION

CogState 
ClinicalTrials

CogState ClinicalTrials is a **computerized cognitive testing system** customized to suit your individual clinical trial design. With proven validity, reliability and sensitivity, it is the ultimate testing solution.

Rapid : Our test batteries are designed to fit the time limits of your protocol. For instance, our Early Phase Battery takes only 12 minutes to administer and even faster batteries are possible depending on your testing requirements.

This allows you to:

- Reduce test fatigue
- Avoid delaying the assessment of non-cognitive measures
- Simplify test administration

All our test batteries incorporate CogState's unique DataPoint® technology. This enables the real-time collection, monitoring and discrepancy management of data which minimizes delays and increases efficiency.

User Friendly : All CogState test batteries run on standard computer equipment and allow for non-expert administration. All our tasks utilize culture-neutral stimuli, meaning that anyone can be tested regardless of language, literacy, ethnicity and socio-economic status.

Your study will be supported by a dedicated project manager at CogState who will liaise with each study site from set up to closeout. You will also have access to our expert scientific team who can advise you on the most appropriate outcome variables and statistical method for the analysis of your data. We provide full site training along with 24/7 technical support.

Experienced : Our tests have been used extensively by leading pharmaceutical companies in phase I to phase IV trials with both healthy volunteers and patient groups. Our customers include 5 of the 10 leading pharmaceutical companies, numerous small pharmaceutical companies, biotech companies and over 100 universities. Our areas of cognitive expertise include Alzheimer's Disease, Schizophrenia, Depression, HIV/Hepatitis C, Insomnia, ADHD, Parkinson's Disease, Pain and Traumatic Brain Injury.

The validity of our tests has been confirmed in over 100 peer-reviewed scientific articles. Our experts have published over 300 journal articles, co-authored numerous book chapters and edited and authored textbooks and handbooks in neuroscience and neuropsychology.

CogState is fully compliant with FDA 21 CFR Part 11 and our quality and data systems have been audited successfully by independent consultants and global pharmaceutical companies.

We are **specialists in integrating computerized neuropsychological testing and cognitive neuroscientific methodology** to assess the efficacy of pharmacological treatment. We invite you to contact us now for a free demonstration.
